

PYTHON FOR PREDICTIVE DATA ANALYTICS

COURSE GUIDE: MAY - AUGUST 2019
© 2019 PYTHON CHARMERS

Python for Predictive Data Analytics

A specialist course

Audience: This is a course for data scientists, quants, financial analysts, researchers, statisticians, and software developers interested in learning the fundamentals of data science and machine learning in Python.

Context: Trawling through large volumes of data and making accurate inferences and predictions are now skillsets in fierce demand.

Overview: This intensive, hands-on, practical training course will teach you how to use Python competently and how to apply some of Python's most powerful and productive tools processing, analysing, modelling, and visualising various kinds of data.

Days 1-2: You will gain a solid understanding of the Python language and experience using Python for a wide range of scripting, data-manipulation and plotting tasks with data in a variety of formats, including CSV, Excel spreadsheets, SQL databases, JSON, and API endpoints.

Days 3-4: You will learn about the principles of machine learning (ML) and how to perform each stage of a machine learning project: data

prep, feature selection, model selection, training, validation, model refinement, production deployment.

You will apply powerful ML algorithms for classification, regression, and clustering, in useful practical settings on small and medium-sized data sets.

Format: Each topic is a mixture of expert instruction, worked examples, and hands-on exercises.

Expert instructors: See bios below.

Venues: modern computer-based training facilities (CBD locations).

Dates and locations, May - August 2019:

Melbourne: 22-25 July 2019

Sydney: 26-29 August 2019

Duration: 4 days

Price: \$3,200 (excl GST)

PYTHON

Topic outline

Day 1: Python basics

Day 1 covers how to use Python for basic scripting and automation tasks, including tips and tricks for making this easy:

- Why Python? What's possible?
- The *Jupyter* notebook for rapid prototyping
- Modules and packages
- Python concepts: an introduction through examples
- Essential data types: strings, tuples, lists, dicts
- Worked example: fetching and ranking real-time data from a web API
- Raising and handling exceptions

Topic outline

Day 2: Handling, analyzing, and presenting data in Python

Python offers amazingly productive tools like Pandas for working with different kinds of data. Day 2 gives a thorough introduction to analyzing and visualizing data easily with Python:

- Reading and writing essential data formats:
CSV, Excel, SQL, JSON, time-series (others on demand)
- Indexing and selecting data in Pandas
- Data fusion: joining & merging datasets
- Summarization with “group by” operations; reshaping; pivot tables
- Interactive visualization and statistical graphics with *Altair*
- Worked example: creating automated reports with *Jupyter*

Topic outline

Day 3: Time-series, simulation, inference and modelling

Day 3 demonstrates more advanced features of Pandas for working with data, including time-series data. It then describes Monte Carlo simulation methods and walks you through using powerful methods of inference and modelling for different kinds of data in Python:

- Time-series analysis: parsing dates, resampling, handling time-zones
- Introduction to *NumPy* for manipulating vector and matrix data: data types, powerful indexing, reshaping, *ufuncs*
- Classical statistics: Monte Carlo simulation and linear regression with *scipy.stats* and *statsmodels*
- Density estimation with *scikit-learn*
- Dimensionality reduction with *PCA*

Topic outline

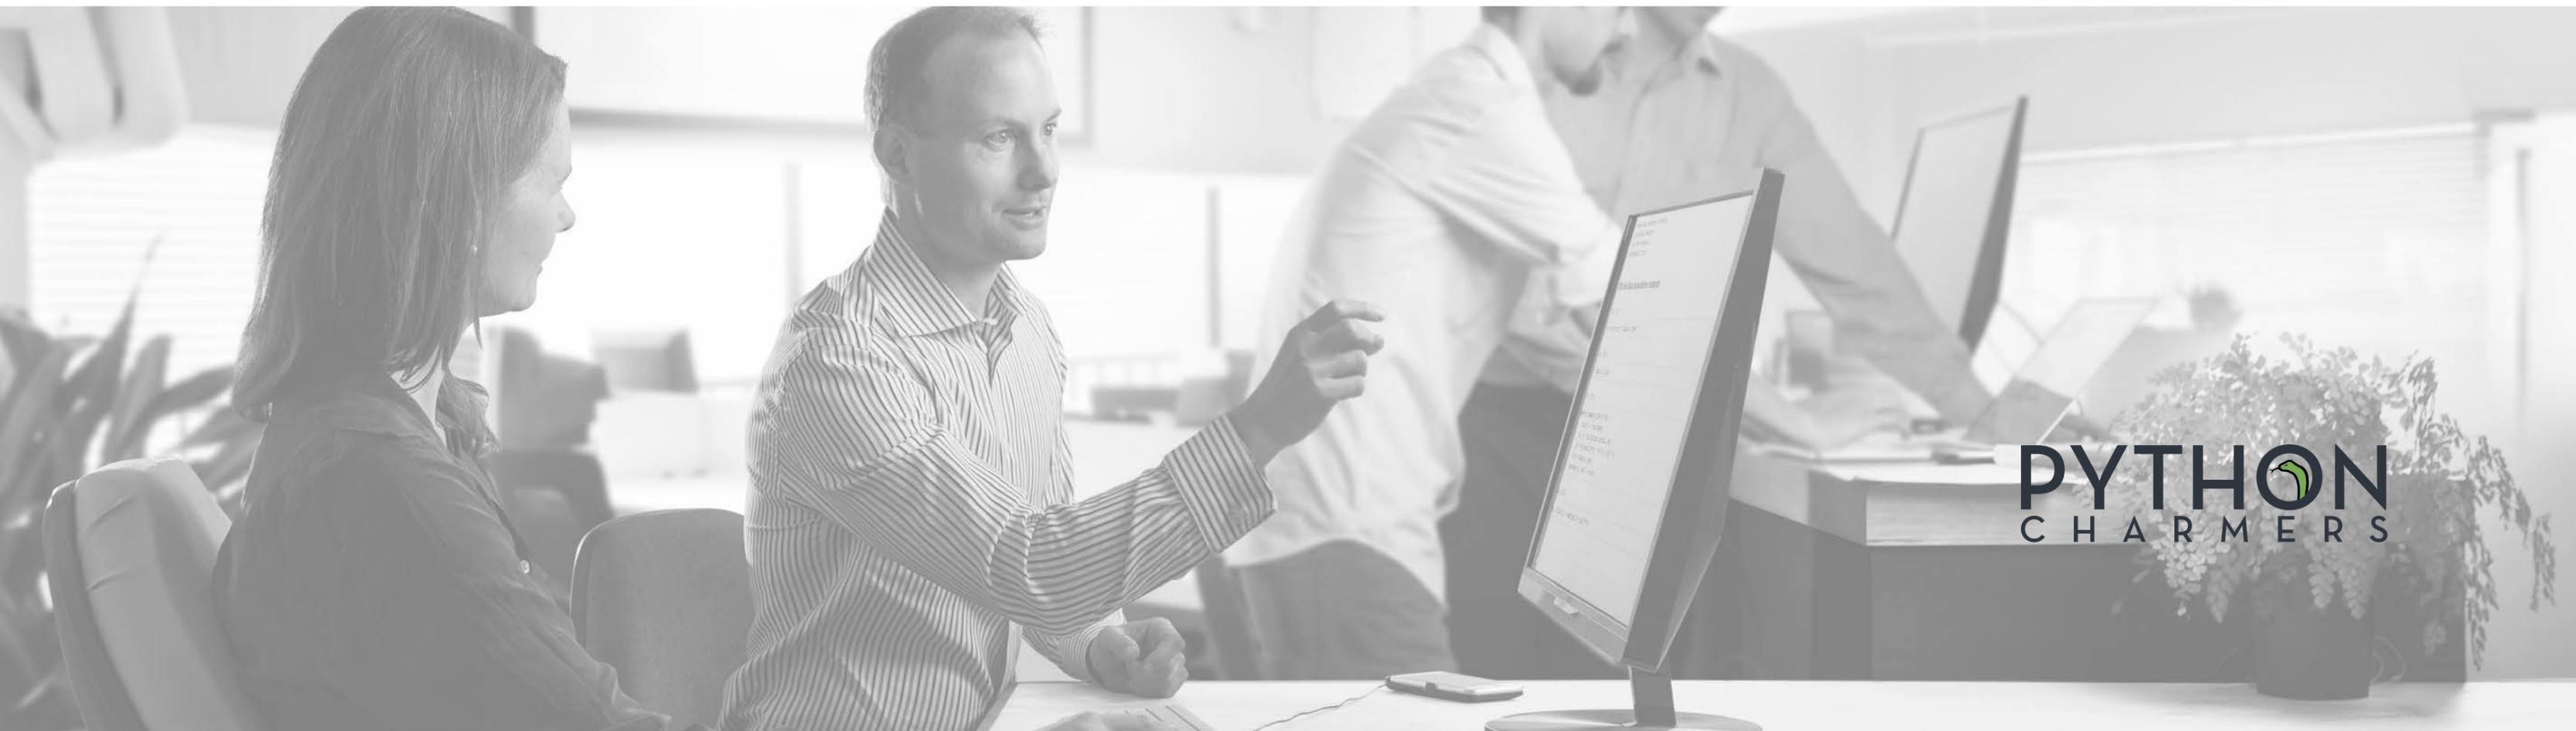

Day 4: Machine learning

Day 4 introduces a more automated approach to modelling real-world data with several powerful machine learning algorithms using *scikit-learn*. The datasets are selected from a range of industries: financial, geospatial, medical, and social sciences:

- Concepts of machine learning (ML)
- Overview of the ML package ecosystem in Python
- Classification with *scikit-learn*:
 - Naive Bayes, logistic regression, *SVMs*, random forests
 - Application to diagnosis, AI systems, and time-series prediction
- Nonlinear regression, with application to forecasting
- Clustering data with *DBScan*, with application to outlier detection
- Validation and model selection
- Deploying machine learning models in production

Supplemental materials

We will provide you with printed course notes, cheat sheets, and a USB stick containing kitchen-sink Python installers for multiple platforms, solutions to the programming exercises, several written tutorials, and reference documentation on Python and the third-party packages covered in the course.

Instructor bio

Dr Edward Schofield

Ed has consulted to or trained over 2000 people from dozens of organisations in Python, including Atlassian, Barclays, Cisco, CSIRO, Dolby, Harvard University, IMC, Singtel Optus, Oracle, Shell, Telstra, Toyota, Verizon, and Westpac. He is well-known in the Python community as a former release manager of *SciPy* and the author of the widely used *future* package. He runs leads the Python user group in Melbourne and regularly presents at conferences in data analytics and Python in Australia and internationally.

Ed holds a PhD in machine learning from Imperial College London, with a focus on generative models for sequence prediction. He also holds BA and MA (Hons) degrees in mathematics and computer science from Trinity College, University of Cambridge. He has 20+ years of experience in programming, teaching, and public speaking.

Instructor bio

Dr Robert Layton

Robert is the author of the book “Data Mining in Python”, published by O’Reilly. He provides analysis, consultancy, research and development work to businesses, primarily using Python. Robert has worked with government, financial and security sectors, in both a consultancy and academic role. He is also a Research Fellow at the Internet Commerce Security Laboratory, investigating cybercrime analytics and data-mining algorithms for attribution and profiling.

Robert is a contributor to the Python-based *scikit-learn* open source project for machine learning and writes regularly on data mining for a number of outlets. He is also the author of the website “*LearningTensorflow.com*”. He has presented regularly at a number of international conferences in Python, data analysis, and its applications.

Instructor bio

Henry Walshaw

Henry has over 15 years of experience in application development with Python, particularly in the natural resource management field. Henry's core technical expertise relates to the development and analysis of large scale spatial datasets and communicating this understanding to people including subject matter experts and the general public. Henry has given Python training courses to staff of dozens of organisations in Australia, including AGL, Commonwealth Bank, CSIRO, National Australia Bank, the NSW Department of Finance, Shell, and Telstra.

Before joining Python Charmers, Henry worked in both government (at GA, DSE Victoria, and the EPA) and in the private sector as Senior Spatial Consultant with Sinclair Knight Merz (SKM) and we-do-IT. He holds a Bachelors in Computational Science.

Other information

Computer: An computer and internet connection will be provided for you during the course.

Exercises: There will be practical programming exercises throughout the course. These will be challenging and fun, and the solutions will be discussed after each exercise and provided as source code. During the exercises, the trainer(s) will offer individual help and suggestions.

Timing: The course will run from 9:00 to roughly 17:00 each day, with breaks of 50 minutes for lunch and 20 minutes each for morning and afternoon tea.

Personal help: Your trainer(s) will be available after each day for you to ask any one-on-one questions you like — whether about the course content and exercises or about specific problems you face in your work and how to use Python to solve them. We encourage you to have your own data sets ready to discuss if you wish.

About Python Charmers

Python Charmers is the leading provider of Python training in the Asia-Pacific region, based in Australia and Singapore. Since 2010, Python Charmers has given over 250 training courses and bootcamps to about 3000 delighted people from organizations such as AGL, Atlassian, Barclays, CSIRO, Cisco, Deloitte, Dolby, IMC, pwc, Singtel Optus, Shell, Sportsbet, Telstra, Toyota, Verizon, Westpac, and Woolworths. Python Charmers specializes in teaching programming and data science to scientists, engineers, data analysts, quants, and computer scientists in the Python language.

Python Charmers' trainers boast years of Python experience and deep roots in the open source community, as both speakers at events and contributors to well-known open source projects, including *NumPy*, *SciPy*, *Scikit-Learn*, *Pandas*, and *Python-Future*.

Testimonials: Testimonials from past participants of similar bootcamps and training courses are available at
